

THE BOSTON GROUP

...adds value to your systems by simplifying your application development efforts through Microsoft Technologies

The Boston Group set up the Microsoft Competency Center (MCC) to enable clients to get the best benefits of Microsoft technologies. The MCC captures the complexities of client's business requirements and translates them into highly scalable solution.

Microsoft Certified Solution Provider MICROSOFT TECHNOLOGY PARTNERS — The Boston Group is a Tier 1 certified solutions provider for Microsoft and has demonstrated expertise in delivering Microsoft Technologies.

KEY STRENGTHS

TBG takes pride in their people, processes and works in partnership with clients to solve their business problem. This differentiates TBG from other software companies.

- Our technologists are **Microsoft Certified System Developers** well versed with Microsoft solution lifecycle.
- TBG technical leads and developers are engineers with vast international experience in providing solutions to the global market.
- TBG's processes are tuned to industry standards. Its strict adherence to ISO standards enables it to deliver high quality software products consistently.
- TBG works in partnership with clients which ensures collective responsibility and contributes towards the success of any project.

With it's skilled personnel, the TBG MCC has undertaken the following projects:

- Architecting and developing completely new business applications.
- Integrating with third party legacy systems.
- Re-engineering and enhancing the functionality of existing applications.

DEVELOPMENT METHODOLOGY

- The TBG project methodology is a step-wise development and testing process that takes our clients from idea to launch and beyond.
- TBG takes the Software Development Life Cycle (SDLC) to the next level by using ideas from Dynamic system Development Methodology (DSDM) as well as Rapid Application Development (RAD).
- The Target, Build and Grow methodology has evolved over several years by meeting the dynamic needs of our clients.

Target Build Grow methodology developed by The Boston Group based on it's experience in application development over the past years enables the client to reap the benefits as listed below:

- Enables the rapid development of business solutions
- Focuses both the client and the development team on a set of activities that lead to a well defined solution
- Enables the client to make changes throughout the process
- Ensures that new requirements are met as they arise

KEY PROJECTS

TBG MCC focuses its core strengths to help clients in the following areas:

1. Custom Business Application:

The TBG MCC has developed unique custom software application using Visual Basic, Active Server Pages, Microsoft Transaction Server and XML that included complex modules like, Work Order Process Module, Dispatch Module for Wind River Environmental, Americas largest non-hazardous waste water disposal company.

2. .Net Applications:

TBG is working with companies in the development of reliable, scalable and secure .Net application in the field of e-learning and other sectors.

“ TBG takes pride in their people, process and works in partnership with their clients to solve their business problems. ”

SERVICES

- Custom Application Development:**

Our expertise in multitude of vertical and technical domains has positioned us strongly to deliver scalable, robust, secure and easily maintainable applications. We ensure that the solution deployed is with the best architecture and implemented with our best practices.

- .Net Application Development:**

Building .NET solutions that are reliable, scalable and secure, using Web services

- Testing Services:**

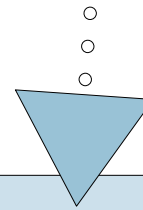

To complement its Microsoft development and to be consistent with its quality initiatives, the TBG MCC testing service works effectively to provide high quality solutions to the clients consistently.

PARTNERSHIPS

- Technology - Microsoft Certified Solution Provider
- Windows Services for UNIX and Microsoft Interix

DELIVERY MODEL

Our Global Delivery Model (GDM) is a framework for distributed project management and multi-location engagement teams. The Global Delivery Model is a key driver of engagement success and value realization for our clients. It provides clearly defined process guidelines emphasizing the importance of information flow and communication. The robustness of the Global Delivery Model combined with the infrastructure and quality orientation reduces the engagement risk for a client compared to conventional delivery models.

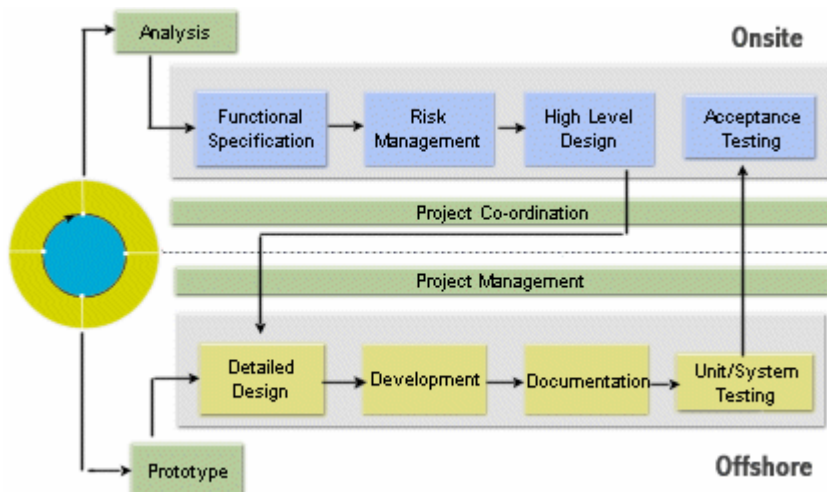

SKILL AREAS:

Application Server Technology

- ◆ .Net Framework
- ◆ SQL Server
- ◆ Commerce Server
- ◆ BizTalk
- ◆ Content Management Server

Security

- ◆ Windows 2000 for Kerberos, the Microsoft Active Directory® service, PKI, EFS, and IP Sec.
- ◆ XML messaging interfaces on the building block services, which enable auditing and accountability.
- ◆ Digital Rights Management (DRM) for authorization of content.
